Introduction

Course Title: Course title FIXME

Description: Course description FIXME

Duration: ...

Objectives

On completing this course, you should be able to:

- Observable, measurable objective...
- Observable, measurable objective...
- Observable, measurable objective...

Prerequisites

This course assumes that you have the following prior experience:

- Course or experience...
- Course or experience...
- Course or experience...

Use of Artificial Intelligence: This publication contains content or media that is generated or assisted by AI tools. All the Training deliverables have primarily human authorship, and all content was reviewed by a human domain expert.

Lab Environment

FIXME: Instructions for accessing the lab environment for this hands-on based training.

Chapter 1

In this section, we cover… FIXME

- Add or remove section entries in the `antora.yaml` file as needed.
- Ensure you create or delete the corresponding directory for the chapter accordingly.

Section 1

- Create multiple copies of this section as needed.
- Remove any unnecessary sections or chapter pages.
- Customize the section as appropriate.
- Ensure that each page contains a manageable amount of content.

Section 2

- Create multiple copies of this section as needed.
- Remove any unnecessary sections or chapter pages.
- Customize the section as appropriate.
- Ensure that each page contains a manageable amount of content.

Section 3

- Create multiple copies of this section as needed.
- Remove any unnecessary sections or chapter pages.
- Customize the section as appropriate.
- Ensure that each page contains a manageable amount of content.

Tabbed code blocks

This page demonstrates `@asciidoctor/tabs` in Antora: use tabs for multiple languages, or to separate exercise instructions from solutions.

Language tabs

Java

```
public class Hello {
  public static void main(String[] args) {
    System.out.println("Hello");
  }
}
```

Python

```
def main():
    print("Hello")

if __name__ == "__main__":
    main()
```

Exercise and solution

Exercise

Try writing a function that returns the sum of two integers. Use your language's usual entry point if you need a quick test.

Solution

```
function add(a, b) {
  return a + b;
}
console.log(add(2, 3));
```

Collapsible blocks

This page demonstrates collapsible example blocks in Antora: use them for optional **Hints**, **Deep dives**, or other detail that should not block the main lesson flow.

No extra Antora extension is required; `[%collapsible]` is built into Asciidoctor.

Hint (collapsed by default)

▼ *Hint*

Try the exercise first; open this only if you are stuck.

- Check that your environment variables are set.
- Re-read the previous section on configuration.

Deep dive (collapsed by default)

▼ *Deep dive: how the pipeline stages relate*

The build runs **validate**, then **compile**, then **package**. Skipping a stage can leave artifacts out of date; that is why CI always runs the full chain.

```
./gradlew clean build
```

Starts expanded

▼ *Optional context*

This block uses `[%collapsible%open]` so it is expanded on first load. Use sparingly when the extra context is still optional but you want it visible by default.

Images

This page demonstrates images, audio, and video stored in `modules/chapter1/images/`. The **estimated time** shown below the title includes reading time for the text on this page plus the duration of embedded images, audio, and video.

Copy media files into `modules/chapterN/images/` and reference them with the macros below. Local audio and video do not need extra markup; duration is detected automatically when the page loads. Each `image::` macro adds 15 seconds of viewing time by default.

Image

The sample image below uses the default 15-second viewing allowance.

Image duration (manual override)

Override viewing time for complex diagrams, or exclude decorative images:

Passthrough diagram HTML can declare duration on the `<img>` tag:

```
<img src="https://example.com/diagram.png" data-media-duration="90" alt="Flow diagram">
```

Audio

The sample audio clip is included from the chapter images directory.

▶ audio-file.wav *(audio)*

Video

The sample video clip is included from the chapter images directory.

▶ video-file.mp4 *(video)*

External media (manual duration)

When audio or video is hosted outside the course (or embedded from YouTube/Vimeo), the browser cannot always determine duration. Set the length in seconds with the `role` attribute on the macro.

This example uses a hypothetical external URL; only the declared duration is counted for estimated time.

▶ https://example.com/lecture.mp3 *(audio)*

For YouTube or Vimeo embeds, use the same pattern:

▶ https://www.youtube.com/watch?v=rS3M00dIxS4 *(YouTube video)*

Alternatively, if you know the playback end point, you can use the `end` attribute (seconds from the start of the clip):

▶ https://example.com/clip.mp3 *(audio)*

Passthrough iframe (manual duration)

When embedding video as raw HTML in a passthrough block, set the length in seconds on the `<iframe>` tag or on a wrapper element.

This example uses a placeholder URL; only the declared duration is counted for estimated time.

```
<iframe
  src="https://example.com/embed/video"
  data-media-duration="240"
  width="100%"
  height="600px"
  frameborder="0"
  allowfullscreen
  webkitallowfullscreen
  mozallowfullscreen
  allow="clipboard-write"
  muted>
</iframe>
```

Alternatively, wrap the iframe in a div with the same pattern used by the `video::` macro:

```
<div class="videoblock media-seconds-180">
<iframe
  src="https://example.com/embed/other-video"
  width="100%"
  height="600px"
  frameborder="0"
  allowfullscreen
  muted>
</iframe>
</div>
```

Chapter 2

In this section, we cover… FIXME

- Add or remove section entries in the `antora.yaml` file as needed.
- Ensure you create or delete the corresponding directory for the chapter accordingly.

Section 1

- Create multiple copies of this section as needed.
- Remove any unnecessary sections or chapter pages.
- Customize the section as appropriate.
- Ensure that each page contains a manageable amount of content.

Chapter 3

In this section, we cover… FIXME

- Add or remove section entries in the `antora.yaml` file as needed.
- Ensure you create or delete the corresponding directory for the chapter accordingly.

Section 1

- Create multiple copies of this section as needed.
- Remove any unnecessary sections or chapter pages.
- Customize the section as appropriate.
- Ensure that each page contains a manageable amount of content.

Section 2

- Create multiple copies of this section as needed.
- Remove any unnecessary sections or chapter pages.
- Customize the section as appropriate.
- Ensure that each page contains a manageable amount of content.

Appendix

FIXME: Content for Appendix…
